Good evening,

Attached is a summary of work observed today. They were still setting up for drilling with saw cutting and offloading the drill rig and equipment being the only active work conducted while I was onsite. Ramboll, TRS, and GSE discussed guarding options for the drill rig. I didn't stay the full shift since there was limited work being completed. I plan to stay the full shift tomorrow; I'll be on site again a bit before 2pm.

Let me know if you have any questions or want updates in a different format, etc. I'm easiest to reach on my cell 816-223-9384.

Grace
